#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1, 4-5, 7, and 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bird (US 4,841,903) in view of Weber (US 2,008,974).

With respect to claim 1, Bird discloses the claimed method for printing on a printing substrate except for the step of dividing the printing substrate into a plurality of blank substrates. Bird discloses that printing with more than one ink system is conventional (Bird, col. 1, lines 6-10). Thus Bird discloses printing an image with one image printing station, and Bird teaches coating certain areas with ink with a second image printing station. Bird further discloses that it is desirable to print packaging blanks (i.e. product containers, videocassette boxes, col. 2, lines 34-38). In col. 1, lines 47-50, Bird discloses that protective coating compositions (lacquer) are applied over printed images for providing glossy or matte finishes. In col. 1, lines 67-68 and col. 2, lines 1-12, Bird discloses that the wet condition of the printing ink at the time a coating composition is applied there over produces a visible change in the appearance of the portion of the coating overlying the printed images including the certain areas printed by the second image printing station. This application of the coating over printed images results in co-mingling of the ink and the coating at the certain areas thus the two substances are absorbed into one another to a certain extent. Note that phrases such as "intended for application of an adhesive" or "for

application of adhesive" are considered "for use" statements which do not positively recite any method or structure and therefore have no patentable weight in this method claim.

Weber teaches dividing a packaging substrate 4 into a plurality of blank substrates 36 as shown in Figure 1 of Weber. It would have been obvious to combine the teaching of Weber with the method disclosed by Bird for the advantage of the strength that corrugated board (as taught by Weber) gives packaging materials.

With respect to claim 4, the phrase "a small amount of pigments" uses the comparable term, "small" with no basis with which to compare it. The second inking system disclosed by Bird contains either a certain amount of pigment or no pigment. In the case that it contains a certain amount of pigment, it is conceivable that the amount of pigment is small compared to an ink containing more pigment.

With respect to claim 5, while Bird does not explicitly disclose that the coating is colorless, protective coatings are generally colorless and are meant only to protect the image and not change the image with color.

With respect to claim 7, Bird discloses radiant dryer 16 (col. 6, lines 53-55).

With respect to claim 9, Bird in view of Weber discloses the claimed method as mentioned above with respect to claim 1, and Bird additionally discloses that resin binder material is conventionally used in lithographic ink (col. 3, lines 26-29). Figure 1 of Bird discloses that the ink is used in an offset press. This ink when used in a second image printing image station would apply a binder to the above-mentioned certain areas.

With respect to claim 10, Bird discloses that the binder can be a varnish (col. 3, lines 29-30).

Application/Control Number: 10/054,292 Page 4

Art Unit: 2854

## Allowable Subject Matter

3. Claims 16-18 are allowed.

4. Claims 2-3, 6, 8 and 11-12 are objected to as being dependent upon a rejected base claim,

but would be allowable if rewritten in independent form including all of the limitations of the

base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

Claims 16-18 have been allowed primarily for the step of applying a lacquer over the

surface of the printing substrate; the lacquer being absorbed by a binder and interacting with at

least two different ink systems such that degrees of gloss vary amount areas of said at least two

different ink systems.

Claim 2 has been indicated as containing allowable subject matter primarily for the two

ink systems differing with respect to lacquer absorption capacities.

Claim 3 has been indicated as containing allowable subject matter primarily for the two

ink systems being treated differently by curing and/or drying.

Claim 11 has been indicated as containing allowable subject matter primarily because the

ink film and the binder are treated differently buy curing and/or drying.

Claim 12 has been indicated as containing allowable subject matter because the ink film

and binder differ from one another with respect to lacquer absorptive capacities.

Art Unit: 2854

## Response to Arguments

6. Applicant's arguments with respect to the claims have been considered and have persuaded the examiner of removing the 112, first paragraph, rejection and the Stadler et al. prior art rejection.

A new prior art ground(s) of rejection has been applied as indicated above.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dan Colilla whose telephone number is (571) 272-2157. The examiner can normally be reached Tues.-Fri. between 7:30 am and 6:00 pm. Faxes regarding this application can be sent to (703) 872 - 9306.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Hirshfeld can be reached at (571) 272-2168. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
